The body surface temperature and the body temperature are not in the contrast range

Generally speaking, the temperature is low in the morning and the temperature is high in the evening.

Normal body temperature is unique to everyone, ranging from 34.7 to 38 degrees, depending on the location of the temperature.

The following is a reference from the World Health Organization:

measuring method	Normal temperature	measuring method	Normal temperature
Subaxillary temperature	34.7°C—37.3°C	Anus temperature	36.6°C—38°C
Cochlear temperature	35.8°C—38°C	Oral temperature	35.5°C—37.5°C
Forehead temperature	35.8°C—37.8°C		

German import probe

No radiation injury, original import

Only for more accurate measurement

3. Product Feature And Application of the Child forehead thermometer

ThisNon-contact infrared thermometer is convenient for household or public use, ℃/℉ selectable, and alarm in case of abnormal temperatures, auto data record and auto power off.

Green backlight
35.5~37.2
(the baby's body temperature is normal, mother can be relieved.)

Yellow backlight
37.5~38
(baby's body temperature is high, remind mother to pay attention to temperature change)

Red backlight
38.5~42
(a baby has a fever, haste to send a hospital to a doctor)

High temperature alarm

When the temperature is lower than 38 degrees after the measurement is completed, the thermometer will give a "drop", and the screen will turn green or yellow light.

When the temperature is higher than 38 degrees after the measurement is completed, the ear thermometer will produce ten short "drops" and the red light will appear on the screen.
