

Feature and characters of CNC wing type shearing machine:

1. Hydraulic transmission,wing type knife rest,frame overall welded durable using,nitrogen cylinder return,stable and fast
2. With function of stepless adjusting stroke,the gap of upper and lower blade edge is adjusted by the handle,the gap of the blade is uniform,quick,and easy to adjust.
3. Protective grid and electrical interlock ensure safe operation
4. The CNC system and the position encoder constitute a closed-loop control system,which has the advantages of fast speed,high precision,good stability,and can accurately ensure the accuracy of the displacement size of the back gauge,at the same time,the CNC system has a variety of additional function of precision compensation and automatic detection.

Wing type shearing machine equipped with imported shearing machine CNC system

- 1.20x128 LCD display
2. Choose a high blue monitor
3. Simple switch between Chinese and English
4. X axis full digital frequency converter control
5. High control accuracy
6. Smooth running speed
7. Large capacity workpieces storage
8. With continuous multi-step function
9. Program steps can be extended according to user requirements
10. External switch self-diagnosis function
11. Intelligent error reporting system
12. Unidirectional positioning function

High Speed
