

The hydraulic guillotine shears( refer to hydraulic brake type shearing machine) is an industrial machinery used to cut the blank of straight edge

Work principle of the hydraulic guillotine shears( refer to hydraulic brake type shearing machine)

The hydraulic guillotine shears is often used to cut straight edge of the blank.The shearing process shall ensure the straightness and parallelism,and minimize the distortion of the plate , so as to obtain high quality workpiece

### **Advantage of the hydraulic guillotine shears**

1. Adopt advanced integrated hydraulic system,good reliability.
2. Adopt three-point support rolling guide to eliminate support gap and improve shearing quality.
3. Automatic back gauge,manual adjustment,digital display,Blade gap is adjusted by manual wheel,which is quick,accurate and convenient.
4. Rectangular blade,four blades can be used,long service life,the shearing angle can be adjusted to reduce the distortion of sheet plate.
5. The upper knife rest adopts internal inclination structure,which is convenient for blanking and can improve the working accuracy.
6. It has the function of sectional shearing,with light line function,back supporting device(optional)
