

LED garden light is a kind of outdoor lighting. Its light source uses a new type of LED semiconductor as the illuminant. It usually refers to outdoor road lighting below 6 meters. Its main components are: LED light source, lamp, light pole and flange. The disc and the basic embedded parts are composed of 5 parts. Because the LED garden lamp has the characteristics of versatility, aesthetics, landscaping and decorative environment, it is also called landscape LED garden light. LED has the characteristics of energy saving and high efficiency. It is mainly used for outdoor lighting in urban slow lanes, narrow lanes, residential quarters, tourist attractions, public places such as parks and plazas, which can prolong the time of people's outdoor activities and improve the safety of property.
