## What are pre-filled CBD cartridges?

CBD cartridges are mini vape tanks pre-filled with CBD vape juice, which contain a coil and wick. They are the next logical step up from using disposable CBD vape pens. CBD cartridges utilize universal 510 threading, which means they're compatible with all of your 510 thread and standard vape pen batteries, unlike CBD pods which typically require a proprietary device like the JUUL.

Though CBD oil carts are technically considered disposable, they can generally be refilled and used a few times before disposal if they are constructed of relatively high quality materials. Here are some reasons why these cartridges are so popular right now:

## Pre-filled with CBD vape oil

1. Convenient way to vape CBD
2. Disposable (but re-usable)

3. Compatible with most vape pens
4. Small and pocketable

### **What are re-fillable CBD cartridges?**

Re-fillable cartridges are empty vape tanks that utilize an internal coil and wicking system. They can be filled with CBD vape oil and distillate, THC oil, or regular nicotine e-liquid. They are relatively inexpensive and more cost-effective than using pre-filled cartridges or disposable vape pens. If you already vape and don't want to mix CBD with nicotine or use your main vaping device for CBD, then cartridges are a handy solution.

## **How to fill an empty CBD oil cart**

\*Note: This process can be applied to any re-fillable or empty pre-filled oil cartridge.

1. Start by unscrewing the mouthpiece.
2. Take your CBD vape oil bottle and fill the tank, making sure to not get any liquid inside the middle.
3. If your bottle doesn't have a fine tip dropper, you might need to use a syringe for more precision.
4. Don't overfill it. Leave room for when you put the mouthpiece back on or it could overflow.
5. Wait at least 10-15 minutes to prime the coil (thicker oils may require more time).
6. Once the flavor diminishes or starts tasting burnt, it's time for a new cartridge.

### **How to use a CBD oil cartridge**

Once your CBD oil cartridge is filled and primed, there isn't much work to do. Just screw it on to your 510 thread battery or vape pen. Some batteries that are draw-activated won't require you to press any buttons to turn the device on or off.

1. Make sure your battery is on and charged.
2. Set your device to the lowest voltage setting.
3. Start by taking small short puffs to gauge the effects and to prime the coil.
4. Some cartridges may require a bit more voltage to achieve a satisfying puff.
5. Turn the battery off when you are done by clicking the button five times.

## **About Us**

Address: Rm 102, Bld 6th, Tongfang creative park houting shajing town, Baoan Shenzhen city
