

Centerless Diamond Grinding Wheel

Centerless grinding is an OD (outer diameter) grinding process. The centerless grinding wheel is used for peripheral grinding of workpieces.

Specializing in the Centerless Diamond Grinding Wheel.

Wholesale Centerless Diamond Grinding Wheel Made in China

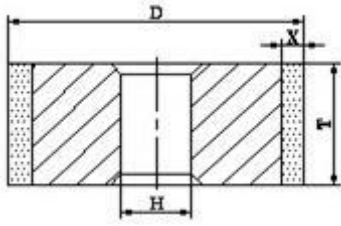

Application of centerless diamond grinding wheels

Rough, semi-finish and finish grinding of cemented carbide bars , PDC Cutter (Polycrystalline Diamond Compacts), tungsten carbide, ceramics, magnetic material, stainless steel bar, PCD and PCBN composites.

Features of centerless diamond grinding wheels

High roundness , good surface finish, superior grinding action, bulk removing of materials, competitive price, long life .

Specification of centerless grinding wheels

Model	D (mm)	H (mm)	T (mm)	X (mm)
 1A1	200	75	50	5, 10
	305	120	150	5, 10
	350	127	125	5, 10
	400	203	150	5, 10
	455	228.6	205	5, 10
	500	127	125, 150, 200	5, 10
	600	305	200, 400, 600	10

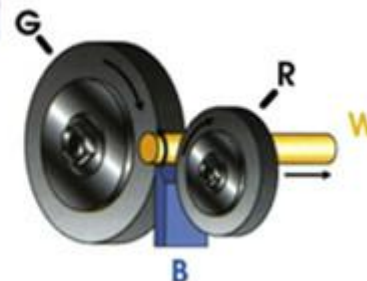

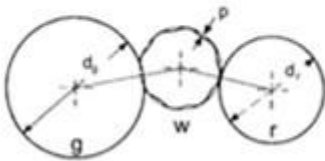

Other specification can be made according to customers requirements

Centerless wheels for the centerless grinding machines:

Centreless (centerless) grinding can perform excellent roundness of the work piece. The workpiece is supported by a work rest blade and set between a rubber regulating wheel that rotates the workpiece and a rotating grinding wheel. The mainly centerless grinding machines: Koyo, Crystec, Dedtru, Landis, Okuma, Paragon, Royal Master, Unison, WMV and so on.

- High roundness
- Good surface finish
- Superior grinding action
- Bulk removing of materials
- Competitive Prices
- Long life
