

metal bond grinding wheel

Diamond grinding wheel is an ideal tool for grinding cemented carbide, ceramics, glass and other materials. It is a very ideal grinding tool. In this article, we will focus on metal bond (bronze bond grinding wheel). Metal bond (bronze bond) is mainly used to make diamond grinding wheels. Bronze bond diamond grinding wheels are characterized by good formability, high strength and certain toughness. But the grinding wheel made of metal bond grinding wheel has poor self-sharpening.

China Latest Selling metal bond grinding wheel Factory

Our factory uses metal bond grinding wheel with various ratios to produce bronze grinding wheels, which have good dynamic and static balance and excellent grinding effect. It is an ideal choice for manufacturers.

Features of metal bond grinding wheel:

1. Good wear resistance, strong abrasive holding power, long life of the grinding wheel;
2. Excellent cutting performance when processing hard and brittle materials such as glass and ferrite.

Use of metal bond grinding wheel:

Used for grinding hard and brittle materials and metal materials such as glass, ceramics, ferrite, semiconductor materials, stone, etc. It is used for the shape processing and electrolytic grinding of cemented carbide materials, as well as the grinding of diamond drills for grinding and machining centers.

Diamond grinding wheels (flat, butterfly, bowl, cup) are made of bronze bond, resin bond and electroplating method. Bronze grinding wheels are suitable for grinding optical glass, decorative glass edging, semiconductor materials, and ceramic hard and brittle rocks. The resin bond diamond grinding wheel is suitable for the best tools of various hard alloy materials such as hard alloy, fine grinding of cutting tools, hard alloy saw blades, and alloy wood milling cutters. Electroplated grinding wheels are suitable for processing high-hard metal and non-metal materials.

Diamond grinding wheel is an ideal tool for grinding cemented carbide, ceramics, glass and other materials. Our factory adopts high-quality diamonds, combined with advanced technological formula, stable and reliable product quality, high grinding efficiency, and low grinding cost. It is a very ideal grinding tool. In this article, we will focus on metal bond (bronze bond grinding wheel). Metal bond (bronze bond) is mainly used to make diamond grinding wheels. wheels are characterized by good formability, high strength and certain toughness. But the grinding wheel made of metal bond grinding wheel has poor self-sharpening.

Our pursuit and enterprise aim would be to "Always fulfill our buyer requirements". We carry on to acquire and layout excellent quality items for the two our old and new clients and realize a win-win prospect for our shoppers in addition as us for IOS Certificate China D200mm Metal-Bond Segmented Diamond Wet Grinding Wheel for Ceramic, "Making the Merchandise of Superior Quality" may be the eternal goal of our organization. We make unremitting initiatives to comprehend the target of "We Will Constantly Maintain in Pace together with the Time". IOS Certificate China Wheel, Grinding Wheels, We expect to provide goods and services to more users in global aftermarket markets; we launched our global branding strategy by providing our excellent solutions all over the world by virtue of our well reputed partners letting global users keep pace with technology innovation and achievements with us.
