

### On-Line Cleaning Device

The material LUCHEN® on-line cleaning device equipment of concrete mixing station adopts YK series vibration water tank screen, supporting belt conveyor and corresponding control system to achieve the on-line cleaning of stone. Vibrating washing screen is compact in structure, excellent in performance, stable in operation and small in noise. You can rest assured to buy On-Line Cleaning Device from our factory and we will offer you the best after-sale service and timely delivery.

### Product Description

The material on-line cleaning device equipment of concrete mixing station made in China adopts YK series vibration water tank screen, supporting belt conveyor and corresponding control system to achieve the on-line cleaning of stone. Vibrating washing screen is compact in structure, excellent in performance, stable in operation and small in noise. LUCHEN® On-line cleaning device is mainly used for grading and cleaning of gravel, gravel, sand and other materials such as mine, coal, building materials, etc. On-line cleaning device is the supporting equipment for all levels of crushing machinery. Washing sieve using disc shaped flexible coupling vibration driven vibrator, makes the screen box for forced continuous movement, the material is in the inclined shaft sieve box screen for continuous casting of the movement, through sewage pump uninterrupted water supply at the same time, makes the material in the water so as to achieve the effect of cleaning, continuous vibration screen can be set up multilayer can be sorted to.

### LUCHEN® On-Line Cleaning Device

model	The layer number of mesh	Dip Angle (°)	Mesh size (mm)	Processing capacity (l/ H)	Motor Power (kW)	Pump Power (kW)	Machine weight (kg)
