

Vibrating Sieve Stone Washer

The LUCHEN® vibrating sieve stone washer made in China is mainly used for grading and cleaning of crushed stone, gravel, sand, etc. in ore, coal, construction materials and others. Vibrating sieve stone washer may be used as a piece of supporting equipment for crushing machineries at different levels as well as the in-line concrete aggregate cleaning equipment.

Product Description

The materials are loaded with the belt conveyor and tossed on the inclined sieve of the sieving tank continuously while the water from the sewage pump keeps flushing the materials. The continuous vibration in the water thus takes away the stones in the materials. Multiple layers of sieves may be installed to produce different grades of materials. Characterized by the compact structure, excellent performance, large capacity, stable operation and low noise, the LUCHEN® vibrating sieve stone washer is mainly used for grading and cleaning of crushed stone, gravel, sand, etc. in ore, coal, construction materials and others. Vibrating sieve stone washer may be used as a piece of supporting equipment for crushing machineries at different levels as well as the in-line concrete aggregate cleaning equipment.

LUCHEN® Vibrating Sieve Stone Washer

Technical parameter	Capacity (t/h)	Layers of sieve	Inclination (°)	Mesh size (mm)	Processing capability (t/h)	Motor power (kW)	Pump power (kW)	Weight (kg)
