

LIANGJU RUBBER

Automotive Bellows

The following is an introduction to Automotive Bellows, I hope to help you better understand Automotive Bellows. Welcome new and old customers to continue to cooperate with us to create a better future together!

1. Product Introduction of the Automotive Bellows.

Automotive Rubber Bellows (Automotive Bellows) is also known as rubber bellow seal, rubber expansion joint, and rubber dust boot, etc. Rubber bellows and boots are often used in applications which require a secure and flexible seal around moving parts and components.

Automotive Rubber bellows are a very important component of automobiles, especially the steering system of cars, which are used to protect, cover, and enhance the service life of various machine parts such as shafts, guide ways, pistons, cylinders, and more from dust and foreign particles. Automotive Rubber Bellows can be made by rubber compression molding, liquid silicone rubber injection molding, and rubber extrusion molding.

2. Product Parameter (Specification)

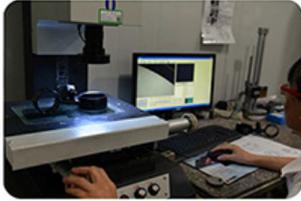

Product Name:	Automotive Bellows
Material:	NBR, HNBR, EPDM, SILICONE, VITON, FLS, FFPM, PTFE
Size:	Any size, Customized/standard and nonstandard
Color:	Black
Packing:	plastic bag&carton box or according to your requirements
Sample time:	20-25days
Application:	Automotive
Warranty:	2years

3. our service.

1. Inquiry about our products can be replied within 12 hours.
2. Professional & experienced staff help you solve problems of silicone and rubber products.
3. Accept customized shape, material, hardness, temperature, size, color, logo and packing.
4. Mode of production: Compression or injection or extrusion.
5. We have a comprehensive range of in-house manufacturing facilities, allowing us to provide fast and effective manufacturing.

4. Quality Control and Certifications

We serve our customers with high quality Customized Shape Rubber Gaskets by strictly follow ISO 9001:2015 and IATF 16949.

Dimensional Inspection

Incoming QC

In-process QC

In-process QC

FQC

5. Packing, Payment and Shipping

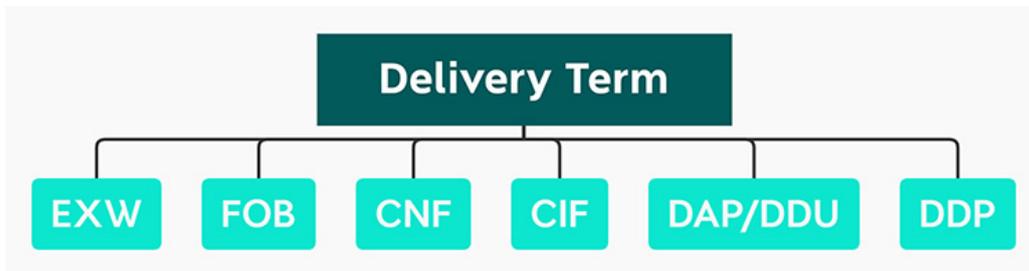

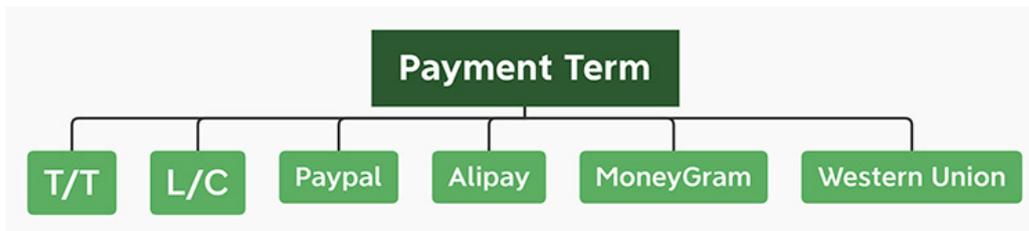

Our packing for all the Customized Shape Rubber Gaskets, strong enough to ensure its safety throughout the whole delivery no matter domestic or oversea shipping. Customized Packing/LOGO/Labeling are Available.

ISO 9001 : 2015

IATF 16949 : 2016

6. FAQ

1. Do you supply material?

Yes, we have our own mixing rubber factory and can supply you with Synthetic Rubbers to fit your applications.

2. If OEM is acceptable?

Yes, Samples are Free of charge

3. What Is EPDM Rubber ?

Xiamen Liangju Rubber Technology Co., Ltd.

Tel: +86-592-7255151

E-mail: Dylan@tec-rubber.com

EPDM is a synthetic rubber polymer and is made from ethylene and propylene monomers. This rubber was developed in the early 1960's and used to produce variety of products like radiator and steam hoses, freezer gaskets, tires, roofing membranes and aircraft seals to name only a few.

4. Why is rubber used to produce industrial products?

Rubber has certain unique properties which makes it suitable to produce rubber products which are widely used in various industrial applications. Rubber is water repellent. It is resistant to alkalies and weak acids. Rubber has elasticity, toughness, impermeability, adhesiveness, and electrical resistance. These properties make rubber useful as an adhesive, a coating composition, a fiber, a molding compound, as well as an electrical insulator.

5. Which type of rubber is best for my application?

There are a range of natural and synthetic rubbers with different properties, making some more suitable than others for particular applications—the key of course is choosing the most appropriate one! For specific requirements, please ask our rubber products specialists for guidance.
