MSP HEAVY DUTY SUMP PUMPS

MSP

HEAVY DUTY SUMP PUMPS

Vertical, shaft driven centrifugal slurry pumps. Rugged pumping solution for the transfer of slurries and large particles from sumps, pits, tanks and other fixed submersible applications.

HEAVY DUTY SUMP PUMPING

MSP heavy duty sump pumps are vertical, shaft driven centrifugal slurry pumps designed for transferring abrasive and high density slurries from sumps, pits and other submersible sources.

Models are available in sizes ranging from 40mm to 250mm discharge and are capable of flow rates from 5 to 350 litres per second (79-5540 USGPM) at heads of up to 40 metres (130ft). The heavy duty design of the MSP pumps allows the passage of large particles with a diameter of up to 50mm.

Pumps will continue to operate even when the top inlet is not submerged, allowing the liquid level to be lowered to the bottom of the sump or pit. Suction extension pipes of up to 2 metres in length can be added to the bottom inlet of the pump to extend the pumping depth.

Designed as a fixed installation the MSP provides reliable pumping performance with minimal maintenance requirements and simple servicing.

CANTILEVERED SHAFT

The standard MSP pumps feature a cantilevered shaft which is up to 2400mm long. The cantilevered shaft means that there is no shaft sealing requirement and the drive end bearings do not come into contact with any pumped product. This reduces the risk of bearing failure and extends the wear life of the pumps.

HEAVY DUTY WET END

Wet end components are manufactured from high quality 27% chrome white iron or rubber coated steel for exceptional wear resistance and service life with minimal corrosion. The heavy duty design can pump high density and abrasive slurries and the large passages of the impeller allows the transfer of large particles without blockages in a wide range of mining, processing and heavy industrial applications.

Wet end stub shaft options are available to suit severe duty applications.

COLUMN AND DISCHARGE PIPES

Column and discharge pipes are available in a range of materials to suit the requirements of operators. Standard options include mild steel and rubber lined mild steel. Composite options are available.

VERSATILE DRIVE OPTIONS

MSP pumps can be directly driven using electric motors or belt driven with either set speed or variable speed operation.

MILESTONE MSP HEAVY DUTY SUMP PUMP

REMOVABLE STRAINERS

MSP pumps feature rubber or cast iron upper strainers and cast iron lower strainers to prevent blockages. The strainers are easily removed for servicing or replacement.

“L” MODELS EXTENDED SHAFT

The extended shaft “L” model features column bearings and shaft seal which further extends the pumping depth and enables the transfer of slurries from deeper sumps and pits.

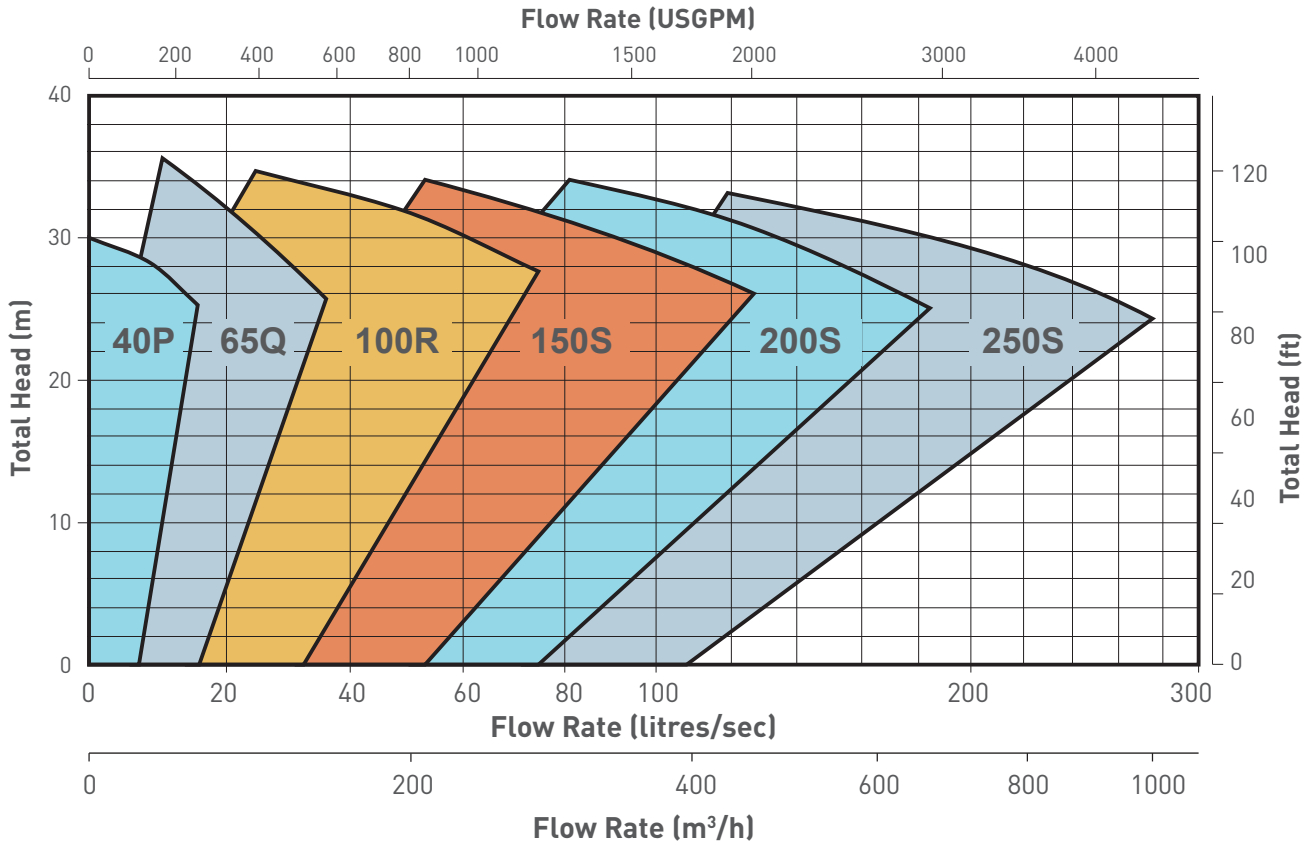

“L” MODEL WITH EXTENDED SHAFT AND SHAFT SEAL

The MSP Heavy Duty Sump Pumps are capable of providing reliable and efficient performance for the transfer of abrasive and high density slurries from sumps, pits and tanks in a wide range of mining, processing and heavy industrial applications.

SELECTION CHART

MATERIALS OF CONSTRUCTION

CANTILEVERED SHAFT

EXTENDED SHAFT

Description	Standard Material	Material Options
Shaft	4140 Mild Steel	Available on Request ¹
Bearing Housing	Cast Iron	
Column	Mild Steel	
Upper Strainer	Rubber	Cast Iron
Lower Strainer	Cast Iron	
Back Liner	27% Chrome White Iron	
Pump Casing	27% Chrome White Iron	Rubber Lined White Iron
Impeller	27% Chrome White Iron	Rubber
Discharge Pipe	Mild Steel	Rubber Lined Mild Steel / Composite
Adaptor Plate	Mild Steel	

¹ installations. Contact us to discuss the availability of material options.
