**You can check below to help you choose the right size of Armoured Cable Gland BW40 Gland**

- Identify the type, size and material of the cable armour.
- Check the short circuit fault current rating of the cable armour.
- Measure the diameter of the inner bedding.
- Measure the diameter of the lead covering.
- Check the actual size of the overall cable diameter.
- Confirm the cable gland type required for the application (single/double compression, the material used, etc.)
- Check whether an entry thread seal is required for IP66 (or IP67/IP68) conditions.
- Identify the other fixing accessories required such as locknuts, earth tags, shrouds etc.

### **Armoured Cable Gland BW40 Gland Details**

Protection class: IP30

Temperature: -20°C to +80°C

Accessories: Matching Accessories available like PVC Shrouds, Earth Tag and Washers etc

Application: Dry indoor, for use with all types of SWA Cable

### **What is the difference between BW and CW Cable Glands**

As far as the difference of the BW and CW Cable glands is concerned, it is to a large

extent dependent on the area in which it is used.

The BW cable glands is used for indoor application when a waterproof seal is not required. The CW cable glands is used for outdoor applications and where necessary to provide an IP66 or IP67 seal with the outer sheath of the cable.

### **Deliver, Shipping And Serving of Armoured Cable Gland BW40 Gland**
