

316 Stainless Steel Coil

Ningbo Qihong Stainless Steel Co., Ltd. is a professional supplier of 316 stainless steel coil, our company can provide customized services for products. Our stainless steel coils have advanced technology, reliable quality and competitive price, have been highly praised by the European and American markets' s customers. We look forward to becoming your long-term partner in China.

316 stainless steel coil is the most widely used steel after 304 stainless steel coil. 316 stainless steel coil is an upgraded product of 304 stainless steel coil. On the basis of 304 stainless steel coil, Ni, Cr, and Mo elements are added, and the density is higher than 304, Has more excellent performance.

Corrosion resistance: 316 stainless steel coil has good corrosion resistance because of the addition of Mo. It can resist marine erosion and industrial atmosphere erosion, and can be used under harsh conditions, which is also an important part of 304 stainless steel.

Heat resistance: It can be used at a high temperature of 1200-1300 degrees, with strong high temperature resistance.

Weldability: It has good welding performance and can be applied to all standard welding methods. Due to its low carbon content, it is not easy to react with chromium, which can reduce the corrosion of welded parts.

Product Parameter (Specification)

Material	304 316 301 310 430 201 400 420 421
Surface	NO.1, NO.4, 2D, 2B, BA, 6K, 8K, Mirror, etc
Thickness	0.02mm-4.0mm/Customized

www.qhstainlesssteel.com

lLength	200-3500 mm or customized according to customer requirements
Width	2-1500 mm or customized according to customer requirements
Standard	ASTM, JIS, GB, AISI, DIN, BS, EN
Certifications	SGS IS09001
Packing	Industry standard packaging or according to client's requirement
Brand	TISCO, POSCO, BAO STEEL, TSINGSHAN, QIYI STEEL etc .
Payment terms	L/C, T/T
Delivery time	Up to order quantity, contact us to know

Product Feature And Application

Due to its excellent corrosion resistance and high temperature resistance, 316 stainless steel coils can be widely used in seawater equipment, chemical, dye, paper, oxalic acid, fertilizer and other production equipment, and can also be used in food processing, ropes, CD rods, bolts, nuts, Medical and other industries.

316 stainless steel is also austenitic stainless steel. Its main characteristics are acid and alkali resistance and high temperature resistance. It is mainly used in the food industry and surgical equipment. At the same time, molybdenum is added to obtain a special corrosion-resistant structure, which is better than 304 stainless steel. Chloride corrosion resistance and better high temperature resistance, so it is also used as marine steel.
