Steel Fully Threaded Rod Zinc Plated

We are a factory with rich experience to produce steel fully threaded rod zinc plated, we are engaged in manufacturing and supply of a wide range of High threaded rod , anchor and other Fasteners. We manufacture the products using quality raw material and using advanced technology to maintain the ISO, standards in our complete range. Further, we can also provide customization facility in terms of products as well as in terms of packaging, to suit the varied requirements of our clients.

1.Product Introduction

steel fully threaded rod zinc plated is a type of metal fastener with threads cut into both ends. These rods resemble the shank of a screw, yet tend to be longer and thicker than a standard screw. Threaded rods do not have heads or washers like those found on a screw on bolt, and tend to be the same diameter along their entire length.

Depending on the model, a threaded rod may feature threads along the entire length, or simply at either end. This product is sometimes known as all-thread, and can also be referred to simply as a stud.

What Are steel fully threaded rod zinc plated Used For?

steel fully threaded rod zinc plated are used in a variety of applications, many of which pertain to manufacturing. Combustion gas engines, for example, often use threaded rods to secure the cylinder head to the engine block. Their dual-threading design allows them to withstand both tension and vibrations.

In addition to manufacturing, threaded rods are used extensively in the construction industry. When constructing buildings and bridges, for instance, construction companies often use threaded rods.

To recap, a threaded rod is a type of heavy-duty feaster that's characterized by the presence of threading on both ends. In some threaded rods, the threading extends just partially on the ends. On others, it extends all the way. All threaded fasteners, however, have threading on both ends, which is in stark contrast to bolts, which typically only feature threading on one end

2.Product Parameter (Specification)

Specification List of steel fully threaded rod zinc plated

Standard	DIN, UNI, ISO, JIS, GB, IS, BS, ASME, ANSI, ASTM and all International Standards
----------	--

Tel:+86-13511283997

Email:Zentrale@xinyuefastener.com

Size	M4, M5, M6, M8, M10, M12, M14, M16, M20, M24, M30, M36 to M100
Length	200mm to 6000 mm
Studs Threads	METRIC, BSW, BSF, UNC, UNF or as required

3.Product Feature And Application

steel fully threaded rod zinc plated can be used to join wood or metal together, acting as a pin to connect the two materials. They are often inserted into concrete or wood during a repair, and can be used to stabilize structures ranging from wooden furniture to concrete walls. Builders and contractors may also use a threaded rod when constructing homes or other types of buildings. steel fully threaded rod zinc plated are also popular with metalworkers when building furniture or consumer goods.

steel fully threaded rod zinc plated also serves as a popular method of hanging sheet metal ducts and other equipment within a building. Installers attach one end of the rod to the ceiling structure, then thread the other end into a special fastener or clip. These clips or fasteners can then be used to hang ductwork, light fixtures, or mechanical equipment.

4.Product Details

steel fully threaded rod zinc plated description:

Category	Fasteners
Sub Category	Rod
Type	Threaded
Sub Type	Stud
Standard	DIN 976
Grade	4.8, 8.8, 10.9, 12.9, B7
Material	Steel
Coating	Zinc plate
Unit	Metric
Description	Thread Full Length (TFL). General Purpose.
Application	External Thread, Tapped Hole, For Nut, Headless
Availability	Stock Item.
