

Metric Right Hand Thread Fully Threaded Rods Stud Fastener

We are a factory with rich experience to produce metric right hand thread fully threaded rods stud fastener, products in strict accordance with the standard production, staff self-inspection and professional quality inspection personnel double control quality control, different surface treatment: black oxide, zinc plate, hot dip galvanized and so on. Products are exported to Europe, South America, the Middle East and other regions, the price is very advantageous, the delivery period is on time.

1. Product Introduction

We are specialized in producing metric right hand thread fully threaded rods stud fastener factory. Also known simply as a stud, a threaded rod is a metal fastener — typically made of carbon steel or stainless steel— that's characterized by the presence of threading on both ends. Depending on the specific type of threaded rod, the threading may extend just partially, or it may extend all the way. Regardless, all threaded rods feature threading on both ends, making it particularly useful in applications where tension is applied.

metric right hand thread fully threaded rods stud fastener with threads running their entire length for full engagement of nuts or other female-threaded components. Threaded rods, also known as all thread rods (ATR) or thread full length rods (TFL), provide high grip strength and evenly distributed tension when mounting and securing components. These fasteners are suitable for use in a variety of general purpose applications, including electrical, plumbing, maintenance, and fabrication.

2. Product Parameter (Specification)

metric right hand thread fully threaded rods stud fastener Specifications:

Standard:	Size:	Material:	Finish:
DIN & ANSI & JIS & IFI	3/16"-4", M4-M100	carbon steel, alloy steel, stainless steel	Plain, ZincPlated(Clear/Blue/Yellow/Black), black oxide, H.D.G, DAC, GOEMET

3. Product Feature And Application

Where is metric right hand thread fully threaded rods stud fastener applied?

Well generally fasteners are used to create non-permanents joints through Screws, bolts, nuts, washers, cotter

joint etc. And some permanent joints through the process which includes welding, riveting, soldering, brazing etc.

4.Product Details

metric right hand thread fully threaded rods stud fastener details:

1.Materials

Threaded products come in a variety of finishes and materials. The product application will help you determine which product and material you need. No matter what the size, shape, color or material used, these products are all designed to be used under a specific amount of tension, which is the breaking point of the material.

2.Finishes

Threaded product finishes depend on the use or application for the product. The most common finishes are zinc chromate (clear zinc), zinc dichromate (yellow zinc), black oxide, and hot-dip galvanized.

3.Size and Dimensions

With so many different shapes and sizes, dimensions can be complicated. The important dimensions to know and measure with threaded products are the diameter, the thread pitch, and the length. Thread pitch measures the amount of threads per inch. There are four main thread pitch measurement types: course threaded UNC (the most common), fine thread UNF, 8 pitch 8UN and Acme Thread. For the length, identify if the overall length of the product is being measured, or from first thread to first thread (see Figure 1 below).
