## **Amorho® Vanity Bathroom Mirror Installation**

If you want to illuminate beautifully, you must have good lighting. The front light of the Vanity Bathroom Mirror or the light on the side of the mirror are very necessary.

◆ When installing, you can use expansion bolts. When drilling holes, pay attention to the type of tiles. If it is all-ceramic, use rhinestones, and drill bit by bit, otherwise, it is very easy to crack.

◆ If you use glass glue to fix, do not use acid glass glue, but choose neutral glue. Acid glass glue will usually react with the material on the back of the mirror, causing mottled mirror surface.

◆ Before applying the glue, it is best to do a compatibility test to see if the glue is compatible with the material. It is best to use special mirror glue. the

◆ In the bathroom, you usually look in the mirror while standing. The lower edge of the Vanity Bathroom Mirror should be at least 135 cm away from the ground. If there is a large height gap between family members, you can adjust it up and down. Try to make the face in the middle of the mirror, so that the imaging effect is better.

◆ It is best to choose a frameless style, because the bathroom is often in a humid state, and frame materials such as wood and leather are prone to change after a long time of use.
