EmeTermExplore Replacement Strap introduction

EmeTermExploreAnti-nausea Wristband is a safety and effective anti-nausea wristband that prevents and relieves nausea and vomiting induced by motion sickness. It can be used for various conditions of dizziness with zero side-effects. We provide a one year warranty for all products. It is covered with an waterproof technology and 30 hours battery time for outdoor activities. Electric Plates come out a non-invasive neuromodulatory stimulation going through brain to prevent brain transmitting nausea signal to stomach, then reduces the nauseous sensation for the users. Immediately effective for the treatment of nausea and vomiting caused by motion sickness (while in a car, a boat, or a plane), PONV (post-operative nausea and vomiting) and morning sickness (during pregnancy) with zero side-effects. Our product is easy to install and charging. We have helped a lot of people suffering from motion sickness. They feel absolutely no nausea and enjoy life now.

EmeTerm

- 30% of the world's population suffer from motion sickness. These also include morning sickness and post-operative nausea and vomiting.

Current remedies for such conditions are to use anti-histamines and anticholinergic medications, but these often react negatively with the medications used during chemotherapy and surgery, causing even more side effects and discomfort for the patients.

- EmeTerm avoids any drug side effects and is not limited by dose limit, making it an excellent option for primary treatment, as well as adjuvant therapy in various scenarios.
- WAT Medical's products have received positive recognition from partners and customers across 30 different countries. The company is currently collaborating with the largest distributors and partners from 12 countries worldwide, including one of the largest supermarket chains of Western Europe: Aldi. The products are displayed on numerous official website homepages, blogs, and sales platforms, generating consumer traffic flow as well as high sales revenue.
- In addition to medical devices, WAT Medical's products are also capable of being sold as consumer products. WAT Medical is partners with Fort Lauderdale and the world's largest cruise company: VIKAND Solutions, as well as Duty Free shops in Hong Kong, Panama, and China. The duo-status of the products provides instrumental sales advantage in the ever-expanding market.
- In 2020, WAT Medical plans to establish collaboration with CVS and Walgreens, two of the largest commercial chains in the U.S.

STEP 2

Wear the device, Ensure skin is sufficiently in contact with electrodes

STEP 3

Turn on Home key to start the device, then adjust level until numb your palm.

Principle of US Version EmeTerm 1 Anti-nausea Wristband

Nausea and vomiting are caused by transmission of a nausea signal to the stomach via the human brain, which causes the stomach to contract irregularly, resulting in vomiting.

By releasing a particular low-frequency pulse, EmeTerm can adjust the vagus nerve signals traveling to and from the stomach, and can prevent or postpone it from receiving nausea signals. This then slows down the irregular gastric contraction, and reduces the nauseous sensation for the users.

1. TENS consists of small unit, attached to the wrist via electrode pads, delivers signal through the median nerve at the location on the underside of the wrist.
2. These signals travel through the body's nervous system to the part of the brain which controls nausea, which causes the stomach to contract irregularly, resulting in vomiting.
3. By releasing a low-frequency pulse, it can adjust the vagus nerve signal traveling to and from the stomach, and can prevent or postpone the brain from transmitting nausea signals to the stomach, then reduces the nauseous sensation for the users.
