

### Medical Pressure Regulator

The China Ningdian® medical pressure regulator is a regulating device that reduces high-pressure gas to low-pressure gas and keeps the pressure and flow of the output gas stable. You are welcomed to come to our factory to buy low price, and high-quality medical pressure regulator. We look forward to cooperating with you.

### Product Description

According to different working principles, the **medical pressure regulators** made in China can be divided into two types: positive-action type and reverse-action type. Common domestic pressure regulators are mainly of two types: single-stage reaction type and two-stage hybrid type (the first stage is a positive-action type, and the second stage is a reverse-action type).

According to the medium, The Ningdian pressure regulators can be divided into oxygen pressure regulator, nitrogen pressure regulator, air pressure regulator, helium pressure regulator, natural gas pressure regulator, stainless steel pressure regulator containing corrosive substances, Industrial regulator, Medical Regulator ETC.
