

### Copper strip multi-roll welding stacking line

This machine is suitable for multi roll connection of precision copper strip. The head and tail of a plurality of copper coils are welded together, thereby reducing the refueling frequency of copper strip products in the application process and improving the working efficiency.

### Function Introduction

This unit is suitable for multi-coil connection of precision copper strips. Multiple copper strips are welded end to end, thereby reducing the frequency of refueling during the application of copper strip products and improving work efficiency.

### Basic composition

This machine is composed of turning mechanism, conveying mechanism, transfer platform, rotating platform, welding equipment and so on.

### Scope of application

Applicable products: precision copper strip

Outer diameter: 800-1500mm Inner diameter: 300\400\500mm Width: 20mm~60mm
