

Steel pipe bagging packaging unit

The China Yilane Tech® Steel Pipe Bagging Packaging Machine Line is applicable to bagging and packaging of single or multiple steel pipes, as well as marking, labeling, collection, forming, binding and other operations.

Product Description

The Yilane Tech® Steel Pipe Bagging Packaging Machine Line which is provided by China suppliers must first determine which products to pack in the packaging machine you will buy. Some packaging machinery manufacturers have many varieties of products. When purchasing a packaging machine, they hope that one piece of equipment can package all their varieties. In fact, the packaging effect of the mobile phone is often better than that of the compatible machine. The variety packed by one packaging machine should not exceed 3-5 varieties. Also, products with large differences in dimensions should be machine-packed as much as possible.

Yilane Tech® Steel Pipe Bagging Packaging Machine Line Basic composition

According to different needs, the feeding mechanism, bagging machine, printing and labeling machine, collection and binding system, horizontal winding packaging machine, end storage and other equipment can be selected for combination.
