

### **Automotive Motor Breathable Film**

You can rest assured to buy customized Automotive Motor Breathable Film from us. We look forward to cooperating with you, if you want to know more, you can consult us now, we will reply to you in time!

### **Product Description**

Automotive Motor Breathable Film is used in the breathable film for Windows, wipers, sunroof motors, starter motors, oil pump motors, etc. For the window motor, because the window motor is assembled under the glass of the door, the water is easy to splash onto the motor when washing the car, so the waterproof requirements of the motor are relatively high.

At present, most window motors adopt fully sealed design. When the temperature rise of the motor is generated, the pressure difference between inside and outside the motor is easy to be generated, leading to the damage of the weakest seal. At this time, the motor needs a breathing apparatus to balance the pressure difference between inside and outside.

Bizhenpin Automotive Motor Breathable Film works in this way. It can balance the pressure difference between inside and outside through gas, and prevent water and oil from flowing into the electric motor. The electric motor is fully sealed and waterproof, improving the reliability of the electric motor. Xin acura for a variety of motor vehicle to tailor the appropriate air products, including TPV respirator, bring back rubber products and welding of diaphragm.
