

Protective Membrane for Pesticide Packaging

You can rest assured to buy customized Protective Membrane for Pesticide Packaging from us. We look forward to cooperating with you, if you want to know more, you can consult us now, we will reply to you in time!

Product Description

For FUNGICIDES, insecticides (imidacloprid, avermectin, etc.), herbicides (GLyphosate, etc.) and other pesticides, it is not allowed to have any leakage during transportation and storage. Therefore, the pesticide industry has a very high requirement for packaging system. Bizhenpin Protective Membrane for clearly defined Packaging system not only ensures the safety of Pesticide Packaging system, but also makes pesticide packaging system have wide temperature and latitude adaptability.

Moreover, since the container wall no longer needs to bear the extra pressure caused by temperature changes, ambient pressure changes, liquid volatilization and reaction, the container wall thickness can be reduced and the cost of the packaging system can be reduced. Bizhenpin's specially treated film also avoids wetting by surfactant-containing pesticides and loss of air permeability. Bizhenpin's main products for the pesticide industry are breathable plugs and aluminum foil breathable gaskets.
