

Electric Blast Constant Temperature Oven
China Qiantong® Electric blast constant temperature oven surface electrostatic powder spraying, coating hard and firm, with strong anti-rust ability. The studio is made of high quality stainless steel plate with rounded corners, smooth, smooth and easy to clean. For the inner stainless steel blast drying box, vertical structure, suitable for all kinds of products or materials and electrical, instruments, meters, components, electronics, electricians and automobiles, aviation, communications, plastics, machinery, chemical, food, chemicals, hardware tools under constant temperature environment conditions for drying and a variety of constant temperature adaptability test.

Product Description:

Between the box and the studio, the superfine glass wool insulation material is filled, which has good thermal insulation function, and effectively ensures the stability and accuracy of the temperature in the box and the impact on the use environment.

The Qiantong® Electric Blast Constant Temperature Oven from China suppliers is designed with a reasonable hot air circulation channel, so that the temperature distribution in the box is more uniform, the temperature rises faster; It is equipped with an outlet duct to discharge the air inside the box. If the gas discharged from the box has bad smell or toxic, the air outlet pipe can be conveniently connected with another pipe to discharge the gas to the designated place. Temperature control using microcomputer intelligent digital technology manufacturing, with industrial PID self-tuning and four double LED window indicator function, high temperature control precision, strong anti-interference ability, and the operation is also very convenient.

Product Parameter of the Electric Blast Constant Temperature Oven

1. Temperature control range: RT+10 ~ 250°C
2. Temperature resolution: 0.1°C
3. Constant temperature fluctuation: $\pm 0.5^\circ\text{C}$
4. Partition board: Two pieces
5. Timing range: 1 to 9999min

6. Liner size (mm): W×D×H 340x320x320
7. Appearance size (mm): W x D x H 490x500x625
8. Power supply voltage: 220V 50HZ
9. Power: 750W

Product feature and application of Electric Blast Constant Temperature Oven

Qiantong® Electric Blast Constant Temperature Oven surface electrostatic powder spraying, coating hard and firm, with strong rust prevention ability, between the box and the studio, filled with ultra-fine glass wool insulation material, with good heat preservation function. Suitable for all kinds of products or materials and electrical, instruments, meters, components, electronics, electricians and automobiles, aviation, communications, plastics, machinery, chemical, food, chemicals, hardware tools under constant temperature environmental conditions for drying and a variety of constant temperature adaptability test.
