

Flashing Ceramic Roof Tile

The flashing ceramic roof tile is a new type of roofing building materials. It has a rectangular tile body with a longitudinal groove on the front side. The tile body has hanging holes on the top of the groove. The left and right sides of the roof tile body are respectively the left and right fitting edges. At the backside of the flashing ceramic roof tile body, there is a rear claw plank. The raised part on the backside body has a prominent rear rib. This kind of flashing ceramic roof tile has a reasonable structure, smooth

drainage, and no water leakage..

Flashing Ceramic Roof Tile

Product Introduction of the Flashing Ceramic Roof Tile

Tangshengyuan® Flashing ceramic roof tiles are a unique and beautiful element of traditional architecture which is new developing modern roof tiles in China. Our company has been exporting the ceramic roof tiles for more than 15 years and get very good praise by overseas buyers. When installing our flashing ceramic roof tile, just fit the roof tiles together, which is convenient, tightly fitted, and firmly connected. The tile body is made of ceramic materials, with high bending and compressive strength and uniform density. It adopts a brand new imported press with strength of 3800 tons and is fired in a kiln with temperature of over 1200 degrees, ensuring superb craftsmanship.

Due to the support of high-tech production equipment, our flashing ceramic roof tile has many advantages such as light weight, non-absorbent and not like cement roof tiles, which can increase the load on the roof due to water absorption, our flashing ceramic roof tile is smooth and plain, and it can be made in various colors, which can make it an ideal roof materials for modern buildings.

Product Specification of the Flashing Ceramic Roof Tile

Product Name:	Flashing Ceramic Roof Tile
Material:	Ceramic、Glazed、Natural Sand
Size:	300*400*10 mm
Weight	2.5kg/pcs
Delivery Time	Within 15 days after getting advance payment
Compression	Strong body can bear more than 250 kgs
Water absorption	1-6%
Certificate:	Architectural Ceramic Quality Supervision
Packing	Rope packing, 9pcs/bundle, carton packing, 9 pcs/ctn, pallet packing, 64 ctns/pallet

Details of the flashing Ceramic Roof Tile

Flashing Ceramic Roof Tile is made of ceramic materials and widely used in the construction field. Its main component is ceramic, which has advantages such as durability, corrosion and aesthetics. Flashing ceramic roof tile has extremely high durability and can maintain good appearance and performance for a long time, making them suitable for buildings that require long-term use.

The flashing ceramic roof tile uses the unique waterproof structure. Its bottom structure of the roof tile allows rainwater to flow more smoothly and quickly, as the ceramic roof tile have a raised head that acts as a water barrier, preventing rainwater from flowing backward even on a horizontal roof. The unique dual waterproof structure makes the flashing ceramic roof tile have no worries whether they are used in strong wind and rainstorm areas or on slopes below 10 °C.
