

Hongfei Production Process for Customized Service

1st Stage: pre-production preparation (*1st charge for prototype/ hand-made sample*)

Period: Within 10 business days

We need the real electronic device for engineering measurement.

- provide expert knowledge of technical issues regarding your design idea and 3D drawing
- confirm your product specification and start making a product prototype (made by PC)
- send out the prototype so that you could test out the structure and to see if it meets your requirement.
- You can still make changes on the prototype before we open a mold. If you satisfy with the prototype design we will proceed the project to the next stage —signing sales contract and confirming purchasing order.

2nd Stage: mold opening (*2nd key charge*) and mass production (*3rd final charge*)

based on qty

Mold opening:

- THIS IS THE CRITICAL PART OF A CASE PRODUCTION PROCESS. ITS A PREREQUISITE AND NECESSITY IN PRODUCTION.

- Once a mold is made, it would be difficult to make further changes and if it's a must, it would cost significantly.

Usually we will provide a detailed quotation including mold fee and mass production fee. We'll suggest the most cost-effective way implementing your project.

Mold Opening: 25~35 days

Mass Production: 15~25 days (depending on the qty)

Be sure to inform us in advance of your expected delivery date so that your business plan could be prioritized and better arranged.

We'd love to establish a long-term business relationship with you on the basis of mutual benefits.

Please let us know if you have any questions.
